

AMENDMENTS TO THE ABSTRACT

A device for cleaning interdental spaces has a tubular guide element having a first profiled open end to allow its positioning at the entry to an interdental space. A cleaning ~~means~~ member mounted movably in the tubular guide element, fixed to a first end of a support ~~means~~ member, the support ~~means for the cleaning means~~ member having a fixed longitudinal direction relative to the axis of the tubular guide element. A gripping ~~means~~ member is provided for moving the cleaning ~~means~~ member between a first position, in which they are entirely arranged inside the tubular element, and a second position, in which they are arranged entirely outside the first end of the tubular element.
